Licensed Vendor Assigned Values

Table 3   DAD Data Elements, 2023–2024 — Group 19 Licensed Vendor Assigned Values

Facilities with vendor grouper software will have these licensed vendor assigned values automatically populated according to the CMG+ and CACS grouping methodology.

Vendor assigned values are mandatory in New Brunswick, Nova Scotia and Manitoba.

Group	Field	Data Element Name	Description
Group 19 — Licensed Vendor Assigned Values	01	MCC	A Major Clinical Category (MCC) is a large grouping of diagnoses generally related to a body system, specific conditions, or trauma.
	02	CMG	A Case Mix Group is a numbered cell/group to which an acute care inpatient is assigned. CMG+ is a CIHI grouping methodology that categorizes acute care patients into groups based on similarities of diagnosis and/or interventions, length of stay (LOS) and resource use.
	04	RIW	Resource Intensity Weight (RIW) are cost weights that are relative to the average cost of a typical acute inpatient case.
	06	Grouping Vendor ID	The ID number of the vendor.
	07	CMG Age Category	The CMG Age Category is the alphabetic age group code that represents the age group and category to which the case is assigned for RIW calculation.
	08	Comorbidity Level (CL)	The CL is the cumulative resource impact of various comorbidities on the patient's stay and resource consumption.
	10	Intervention Event Count	An intervention event is a visit by a patient to an operating room or procedure suite for at least 1 intervention on the CCI intervention partition codes list.
	11	OOH Factor Count	Indicates whether the patient had a specific intervention outside of the admitting institution.
	12	RIW Atypical Code	A measure used to determine a patient's typical or atypical status for the calculation of RIW and ELOS.
	13	ELOS	The Expected length of stay (ELOS) is the length of time a patient is expected to stay in a facility as determined by CMG + methodology.

Group	Field	Data Element Name	Description
Group 19 — Licensed Vendor Assigned Values (continued)	14	RI Level	Resource intensity level (RIL) was created as a single-variable reporting tool to capture complicated and resource-intensive cases beyond CMG and age. RIL measures the degree to which the final RIW value differs from the non-factor RIW of each case.
	15	Abstracting Vendor ID	The ID number of the licensed software vendor for the abstracting system.
	20	CACS	The Comprehensive Ambulatory Classification System (CACS) code is an outpatient grouping methodology for ambulatory data and is based on the ICD-10-CA and CCI classification systems.
	21	MAC	Major Ambulatory Cluster is a high-level grouping of the (CACS) cells generally related to body system or functional grouping.
	22	Vendor Age Category	Vendor Age Category is the CACS age category assigned to the abstract.
	23	Vendor Anaesthetic Category	Vendor Anaesthetic Code is the anaesthetic category code assigned by the CACS methodology.
	24	CACS Investigative Technology Count	A distinct count of the total number of Investigative Technology categories found on each abstract.
	125	Flagged Intervention Status	The Flagged Intervention Status differs from the CIHI assignment.
			If the Vendor Assigned Flagged Intervention Status is not blank, it should be the same as the CIHI assigned Flagged Intervention Status.
			Because this is a warning message, no change was made to the data.
			The original data recorded on the abstract appears on the Submission Detailed Error File as "Original Data Submitted." The CIHI value also appears on the report.
			The first value recorded on the Submission Detailed Error File is the Vendor Assigned value and the value following it, separated by a forward slash, is the CIHI assigned value.
			For example, if the Vendor Assigned a value of 4 and CIHI assigned a value of 1, "4/1" appears on the Submission Detailed Error File.
			For an explanation of Flagged Intervention Status, please refer to the Introduction and Flagged Intervention sections of the CMG+ Directory.
